

Milestone | Terracotta Survey Analysis

Eben at Terracotta wants to analyze his customer survey data. Remember, he has three very specific requirements:

- 1) Which types of plants are most frequently purchased by customers?
- 2) Are there any factors in choosing to buy a plant that are consistently important to customers?
- 3) What information should we advertise to boost Terracotta sales?

Task 1: Frequent Purchases

Eben asked us to uncover which types of plants are most frequently purchased by customers. Terracotta also wants to understand the maintenance requirements (e.g. light requirements, watering frequency) by plant type. This is in the sheet called `responses`.

- | | |
|-----|---|
| (a) | In the <code>maintenance</code> column of the <code>responses</code> table, use the XLOOKUP function to look up the response to the question “What type of plants do you typically purchase?” (<code>plant_types</code>) and return the maintenance requirements. |
| (b) | In the <code>safe-for-pets</code> column of the <code>responses</code> table, use the XLOOKUP function again to look up the response to the question “What type of plants do you typically purchase?” (<code>plant_types</code>) and return whether the plant is safe for pets and children. |
| (c) | Next, use a PivotTable to group the survey responses by the maintenance level and count the number of responses for each level of maintenance. |
| (d) | What type of plants are most frequently purchased by customers? |
| (e) | What percentage of all survey responses list low-maintenance plants as the type of plant they most frequently purchase? |
| (f) | What percentage of all survey responses list safe for pets & children as the type of plant they most frequently purchase? |

Task 2: Reasons for Purchase

Eben is really eager to understand what’s driving plant moms and plant dads to decide which ready-to-go plant to take home. Lucky for us, a more senior analyst already assigned a category to each and every free response. This categorization is in the `free-response-analysis` sheet.

- | | |
|-----|---|
| (a) | In the <code>reason_for_purchase</code> column of the <code>responses</code> table, use the XLOOKUP function to look up the response to the question “What factor is most important to you when choosing a plant to buy?” and return the reason for purchase category. |
| (b) | Use a PivotTable to group the survey responses by the <code>reason_for_purchase</code> categories and count the number of responses in each category. Sort the number of responses in each category from largest to smallest. |
| (c) | What percentage of all survey responses list care requirements (e.g. maintenance, light requirements, watering frequency, etc.) as the most important factor in choosing a plant to buy? |

(d)	What percentage of all survey responses list whether or not a plant is pet-friendly or safe for children as the most important factor in choosing what to buy?
-----	--

Task 3: A Recommendation for Terracotta

Let's get back to Eben's main concern that motivated this analysis. How might Eben use what you found for marketing or advertising strategy? Are there ways that you can use what you learned to drive success?

Try this prompt: My analysis shows that the most frequently purchased plant types are [blank], [blank], and [blank]. Given these insights, what recommendations would you make for how Eben should structure his online store and address customer preferences?

(a)	Together with your team, craft a data-driven recommendation to Eben. Our analysis shows that the most frequently purchased plant type is low-maintenance, emerging as one of the most commonly selected specific plants. Additionally, the top reasons for purchase are care requirements, pet-friendliness/safety for children, and overall plant benefits. Given these insights, Eben should structure his online store to prominently feature low-maintenance plants on the homepage and in marketing campaigns. Highlighting tags such as "Easy to Care For," "Easy Maintenance" would directly align with customer priorities. Since care requirements are
-----	---

LevelUp: Understanding Customer Segments

Do customers who buy plants more frequently (like every week or month) care about the same things as those who buy once a year or for special occasions? For this LevelUp, you'll use the data to explore how purchase frequency relates to other factors most when choosing a plant.

(a)	Build a PivotTable that groups all survey responses by how often customers purchase plants (row) and counts how many responses fall into each frequency category.
(b)	Add reason_for_purchase to the rows of your PivotTable. Then, change the value settings to Parent Row Total (so you can see what percentage of each frequency group chose each reason).
(c)	Look for patterns. Do frequent plant buyers care more about care requirements? Are they more concerned about price or pet safety? Write three short bullet points summarizing your key takeaways that will help Eben understand what the data shows about different types of customers.
